

Carbon Manager™

Carbon Managing Module

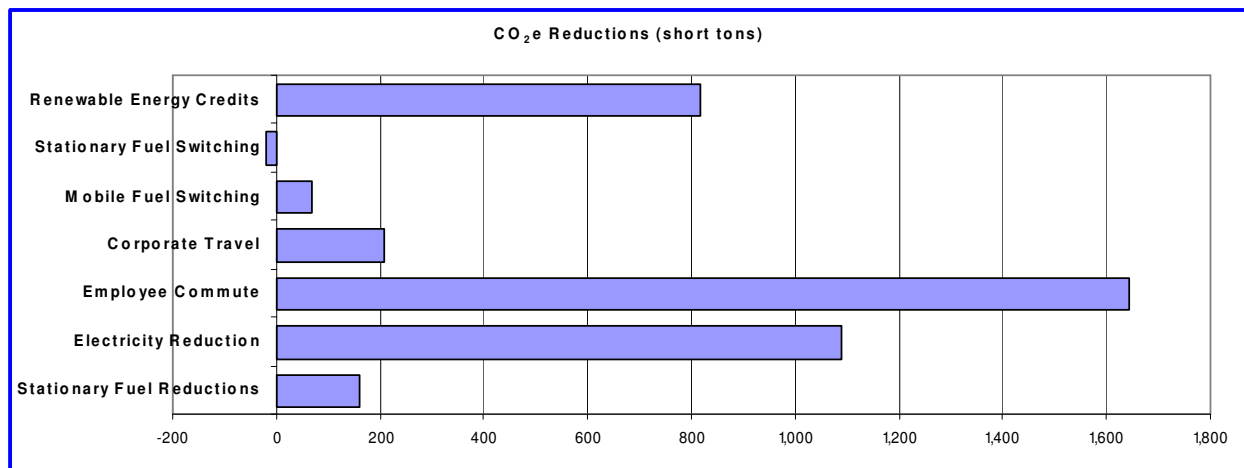

Carbon Manager™, developed and offered exclusively by Competitive Energy Services, LLC, is an essential tool for companies and institutions that are trying to achieve Greenhouse Gas (GHG) emission reductions to meet corporate goals or objectives. The Carbon Managing Module builds upon the results of the Carbon Tracking Module— company Baseline GHG emissions, measured performance and GHG emission reduction goals. The Carbon Managing Module:

- Identifies a broad range of strategies that a company can implement to reduce GHG emissions
- Calculates the cost of implementing each GHG reduction strategy
- Compares the cost-effectiveness of alternative GHG reduction strategies
- Develops a set of GHG strategies that meet overall corporate goals and objectives in the most cost-effective manner.

The Carbon Managing Module is easy to use but provides powerful results:

- Input requirements are minimized and input screens are logical and easy to complete
- Reports are clear, easy to understand and ready to disseminate within your company

Summary			
Strategy	CO ₂ e Reductions (short tons)	Cost (\$ / short ton)	Total Cost (\$)
1 Renewable Energy Credits	817.56	\$7.27	\$5,941.65
2 Fuel Switching	49.24	\$2,354.76	\$115,951.13
Stationary	-20.61	\$4,629.95	\$95,439.17
Mobile	69.85	\$293.64	\$20,511.96
3 Corporate Travel	208.13	\$48.05	\$10,000.00
4 Employee Commute	1,642.09	\$3.04	\$5,000.00
5 Electricity Reduction	1,090.77	\$80.48	\$87,785.72
6 Stationary Fuel Reductions	161.77	\$0.46	\$75.04
TOTAL	3,969.56	\$56.62	\$224,753.53

GHG reductions that are based on our Carbon Manager™ are designed to meet certification requirements established by government agencies, standards boards and carbon exchanges.
