

Carbon Manager™

Carbon Tracking Module

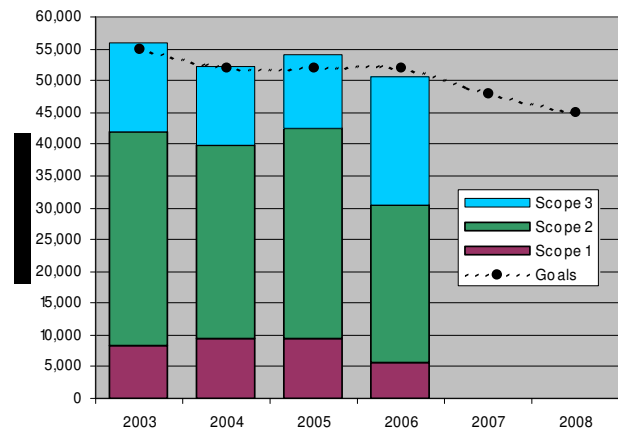

Carbon Manager™, developed and is offered exclusively by Competitive Energy Services, LLC, is an essential tool for companies and institutions that are trying to achieve Greenhouse Gas (GHG) emission reductions to meet corporate goals or objectives. The Carbon Tracking Module measures a company's "carbon footprint" associated with the company's direct and indirect economic activities. The Carbon Tracking Module enables a company to:

- Establish Baseline Greenhouse Gas (GHG) emissions
- Measure GHG emissions overtime against Baseline to assess performance in attaining corporate GHG emission reduction goals
- Evaluate the potential benefits and associated costs of corporate strategies and policies designed to reduce GHG emission

Carbon Manager™ is designed to meet certification requirements established by government agencies, standards boards and carbon exchanges.

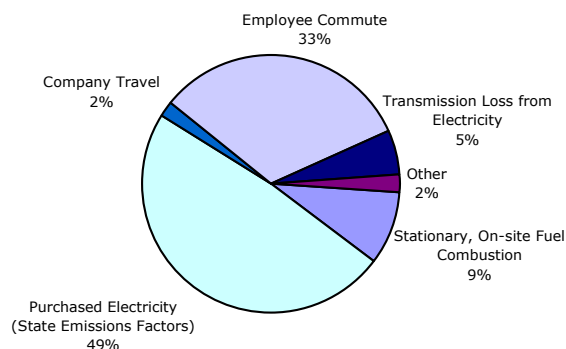

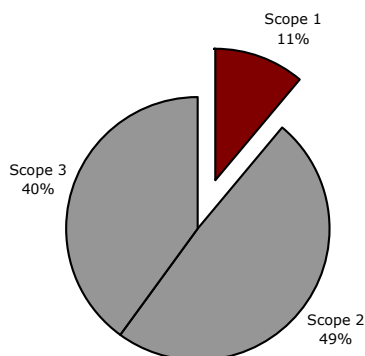

The Carbon Tracking Module measures your GHG emissions over time and compares them with corporate goals and objectives:

- Report format that is ready to disseminate to customers, employees, stockholders or other constituency groups.
- Shows Changes against Baseline
- Reports total GHG emissions and emissions per unit of operations, e.g., employees, square footage, customers, revenues or sales

The Carbon Tracking Module shows you your GHG emissions by sources and which GHG emissions are under your direct control. This information is an essential component of developing GHG reduction strategies to attain corporate goals and objectives.

Emissions Breakdown

Should you buy Renewable Energy Credits, switch to B-20, install energy conservation measures or encourage employee carpooling? The Carbon Tracking module can be combined with our Carbon Managing Module to identify cost effective strategies to lower GHG emissions.

To learn more about Carbon Manager™, please contact Competitive Energy Services, LLC at 148 Middle St., Suite 506, Portland, ME 04101, by phone at (207) 772-6190 and on the web at www.competitive-energy.com.
